10 initiate-collection-from-mobile-money.md

/collections/mobile-money

This endpoint allows you to request a payment from customers by using their phone number enabled for mobile money.

At the point of payment, the customer is required to authorize the payment on their mobile phones. The status of the collection request would be ``pay-offline``.

Once you get this status, you should notify the customer to complete the authorization process on their mobile phones and then listen for webhook notification or requery the `[collection request status endpoint]` (<https://lenco-api.readme.io/v2.0/reference/get-collection-by-reference>) at interval.

Response Schema:

```

```json
{
 "status": boolean,
 "message": string,
 "data": {
 "id": string,
 "initiatedAt": date-time,
 "completedAt": date-time | null,
 "amount": string,
 "fee": string | null,

```

```

 "bearer": "merchant" / "customer",
 "currency": string,
 "reference": string,
 "lencoReference": string,
 "type": "mobile-money",
 "status": "pending" / "successful" / "failed" / "pay-offline",
 "source": "api",

11 initiate-collection-from-card.md

```
# /collections/card
```

```
>  PCI DSS required
>
```

> Using this endpoint involves dealing with cardholder Personally Identifying Information (PII). A Payment Card Industry Data Security Standard (PCI DSS) certificate is therefore required.

This endpoint allows you to request a payment from customers by charging their debit/credit cards.

You send the customer details along with the card and billing information.

****Request****

The request payload would be encrypted. Please follow the guide [\[here\]](https://lenco-api.readme.io/v2.0/reference/encryption) (<https://lenco-api.readme.io/v2.0/reference/encryption>).\n\nThe parameters you can use to build the request payload are given below:

```
[block:parameters]
{
  "data": {
    "h-0": "Param",
    "h-1": "Required?",
    "h-2": "Description",
    "0-0": "email",
    "0-1": "Yes",
    "0-2": "Email address of customer",
    "1-0": "reference",
    "1-1": "Yes",
    "1-2": "Unique case sensitive reference. Only `-, `., `_, and alphanumeric characters allowed",
    "2-0": "amount",
    "2-1": "Yes",
    "2-2": "Amount the customer is to pay. This can include decimals (i.e. 10.75)",
    "3-0": "currency",
    "3-1": "Yes",
    "3-2": "ISO 3-Letter Currency Code e.g. `ZMW`, `USD`",
    "4-0": "bearer",
    "4-1": "No",
    "4-2": "Decide who will bear the fee. Either `merchant` (you), or `customer` (your customer). \nNote: This will only be used if not already set in your dashboard.",
    "5-0": "customer",
    "5-1": "Yes",
    "5-2": "This field holds the customer details",
    "6-0": "customer.firstName",
    "6-1": "Yes",
    "6-2": "The first name of the customer",
    "7-0": "customer.lastName",
    "7-1": "Yes",
```

```

 "expiryMonth": "12",
 "expiryYear": "2024"
 },
 "redirectUrl": "https://www.yoururl.com/verify_payment"
}
```

```

****Response****

For cards that require 3D Secure authorization, the value of `data`.`status` would be "3ds-auth-required" and the response would include an `authorization` object in the `meta` key.

This `authorization` object would contain a `mode` key which will be "redirect", and a `redirect` key.

You should redirect your customer to the URL specified in
`meta`.`authorization`.`redirect` to complete the 3DS authorization.

```
```json
// Response Schema

{
 "status": boolean,
